

Prolias, LLC Spins out Prolias Technologies, Inc., a life sciences research reagent supplier to the cancer research community

Frederick, MD, June 14, 2010 – Prolias Technologies, a life science reagent and services company with a focus on supplying cancer researchers with the highest quality research reagents and unmatched customer service, announced today that it has spun out of Prolias, LLC and become its own entity.

Prolias Technologies will strictly operate as a products and services company serving the cancer research community. Currently, Prolias Technologies has product lines of antibodies, recombinant and natural fraction proteins, as well as ELISA kits, with service offerings around each of these product families for those requiring custom research reagents.

Being located in Frederick, MD gives Prolias Technologies, Inc. the unique advantage of being local to such institutions as the National Institutes of Health including the National Cancer Institute. Prolias Technologies will leverage its central location to supply scientists with the life science research reagents they require.

Joe Hernandez, Chairman, stated "Spinning Prolias Technologies, Inc. out of Prolias, LLC was a natural move for us, it allows us to deliver a higher degree of customer service to our valued customers and allows us to move into new, previously untapped cancer research reagent markets. In addition, the location of Prolias Technologies, Inc. gives us an innate ability to reach, and ultimately supply, the world class cancer researchers at the NIH and NCI with the high-quality reagents their work requires."

About Prolias Technologies

Prolias Technologies, Inc. is a privately held life science reagent and services company dedicated to supply cancer researchers with the highest quality reagents, as well as unmatched customer service. Currently, Prolias Technologies has product lines of antibodies, recombinant and natural fraction proteins, as well as ELISA kits with service offerings around each of

these product families for those requiring custom research reagents.
